Projects:

Personal Projects

◈ **Lyrics Website** – A complete web app built with HTML, CSS, and JavaScript to search and display song lyrics.

◈ **Voice Cloning Model** – Developed a machine learning model for voice cloning, enabling speech synthesis with personalized voice model outputs.

◈ **Sparx (React Web App)** – Developed an in-progress private web application named **Sparx** using **React.js**, focusing on responsive design, component-based architecture, and modern UI practices. It is used for selling digital products like templates, resumes, and images.

◈**Portfolio (React Web App)** – Created a **React-based portfolio website** for a client via LinkedIn, showcasing their work, skills, and achievements.

Academic & Internship Projects

◈ **E-commerce Web Application – Henotic**

- Designed and developed an e-commerce platform with user authentication, product management, and a seamless UI/UX.

◈ **Mail Web Application (Full-stack MERN) – Codegnan**

- Built a full-stack mail web application using MongoDB, Express.js, React, and Node.js.
- Implemented user authentication, email management, and a responsive UI.

◈ **Weather Prediction Flask App (ExcelR)**

- Developed a Flask-based web application that predicts weather conditions using real-time data and ML algorithms.

◈ **Chat Web Application (Full-stack) – Blackbucks**

- Built a real-time chat application using Django.
- Integrated user authentication, chat rooms, and WebSockets for instant messaging.
- Developed a responsive UI for seamless user experience.

Academic Project Details:

NAME	: Ai Powered Personalized Healthcare Recommended for Diabetic Patients
DURATION	: Dec 2024–March 2025
ROLE	: Team Leader
DESCRIPTION	: With the rise of chronic diseases like diabetes, personalized healthcare solutions have become essential for effective management. This project introduces an AI-powered personalized healthcare recommender system designed to assist diabetic patients in managing their condition effectively.
